

Quick Start

Alphion ASEE-1433

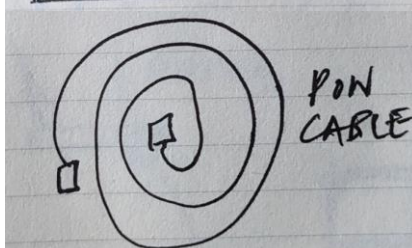

Helpline: 1-800-ALPHION
User guide: alphion.com/routers/asee1433

1 Unpack the router and check the components

Alphion
ASEE-1433
router

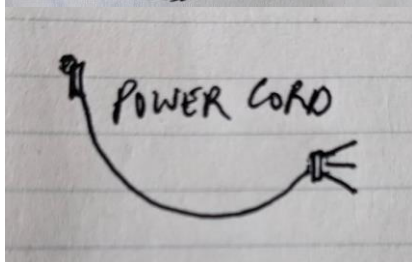

PON cable
(Thin)

Ethernet
cable
(Thick)

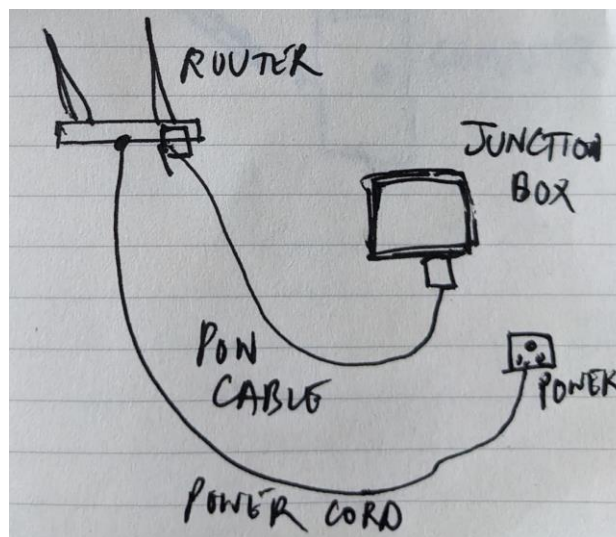

Power cord

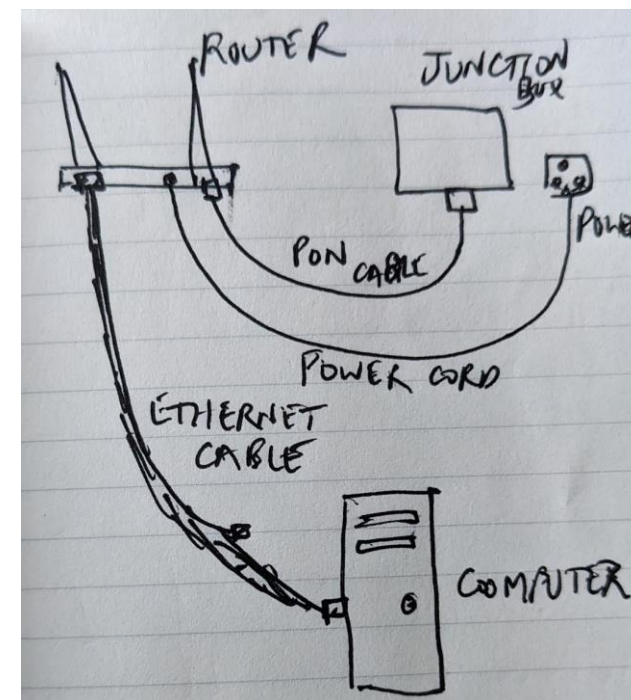

2 Connect the PON cable and plug in the router

- Connect one end of the PON cable to the PON socket on the router. Connect the other end of the PON cable to the internet junction box on the wall.
- Connect the power cord of the router to a power outlet.

3 Connect the router to a computer using the Ethernet cable

! Note

If your computer does not have an Ethernet port, refer to page 10 of the user guide (alphion.com/routers/asee1433).

Instructions continue on reverse.

Quick Start

Alphion ASEE-1433

Helpline: 1-800-ALPHION
User guide: alphion.com/routers/asee1433

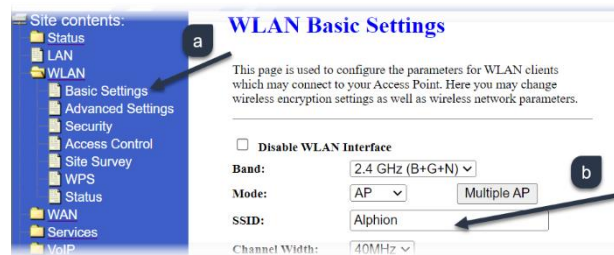

4 Access the web interface of the router

- Open a web browser on the computer. Enter *192.168.1.1* in the address bar. A dialog box appears.
- Enter *admin* in both **Username** and **Password**.
- Click **Sign In**.

5 Create a wifi network name and password

- Select **WLAN > Basic Settings**.
- In **SSID**, enter a wifi network name of your choice.

- Select **WLAN > Security**.
- In **Pre-Shared Key**, enter a password of your choice.

6 Unplug the Ethernet cable and connect to wifi

- Unplug the Ethernet cable between the computer and router.
- Connect to the wifi signal of the router. Instructions for Windows appear below. If you use Mac or Linux, refer to pages 15 to 17 of the user guide (alphion.com/routers/asee1433).

Connecting to the wifi signal on Windows 10 or 11

- Open the **Settings** app.
- Select **Network & Internet**.
- Select **Wi-Fi** and then select **Show Available Networks**.
- Select the name of your wifi network (from step 5b). Click **Connect**.
- In **Network Security Key**, enter the password (from step 5d). Click **Next**.
